3D PRINTING

Keen to continue to develop and increase their range of available services to trade and private customers Matchboard have invested in a new state of the art SLS 3D printer, the Fuse 1+.

The first in the UK to acquire this SLS 3D printer it offers advancement into new sectors whilst complimenting our fundamental skills and knowledge in engineering and design.

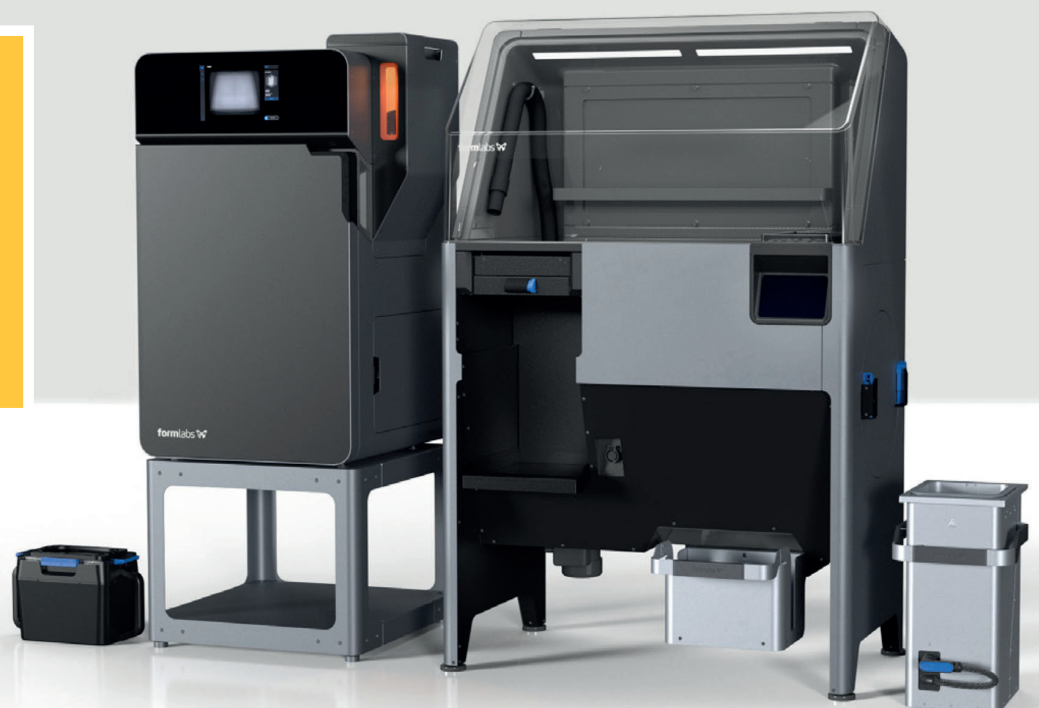

The 3D printer offers printing solutions from conception to completion creating prototypes and production parts for all your design and engineering projects.

Using nylon powder and laser technology the Fuse 1+ is setting new standards in SLS printing.

Keeping in-line with our own environmental policies the printer has the facility to recycle it's waste powder, mixing and combing it with new powder to provide a cost efficient solution to all your 3D printing requirements with no compromise to build and manufacture quality.

With a spacious volume of 165 x 165 x 300mm means you can print everything from full-sized prototypes to large batches of end-use parts, all in a single print.
