**EDGEBANDING**

Edgebanding is just one of the many services we offer here at Matchboard.

Our HOMAG edgebanding machine allows us to increase our finishing options giving us the ability to supply bespoke, cut to size panels edged with ABS, melamine or veneer. It offers precise processing of coiled material to solid lipping's. Edge thickness from 0.4 to 3mm, panel thickness from 12 to 60mm. High quality edging to your sheet materials, the process is precise allowing for only a hairline joint between edging.

Our second edgebander, an Optimat KTD 820 is designed for shaped and curved work pieces. With direct glue application and vacuum table for clamping it can edge panels upto 1m x 1m with a band width of 20 to 45mm.

We are able to edge all industry standard boards, regardless of shape or size, our advanced machinery allows to edge even the most bespoke shapes, with a high quality finish. Perfect for carpenters and cabinet makers servicing the house, kitchen, office and wardrobe sectors.

Available to order for trades and public at our in-house trade counter or through our online shop, House of MDF.

Pallet of 18mm White MFC ready to leave the factory. Edged 1 side with 2mm ABS edging. Ordered for bespoke hand built wardrobe installation.

Dark wood veneered MDF. Office cabinets designed and manufactured in-house.
