

**MATCHBOARD**  
MDF SOLUTIONS

**PAINT SHOP**

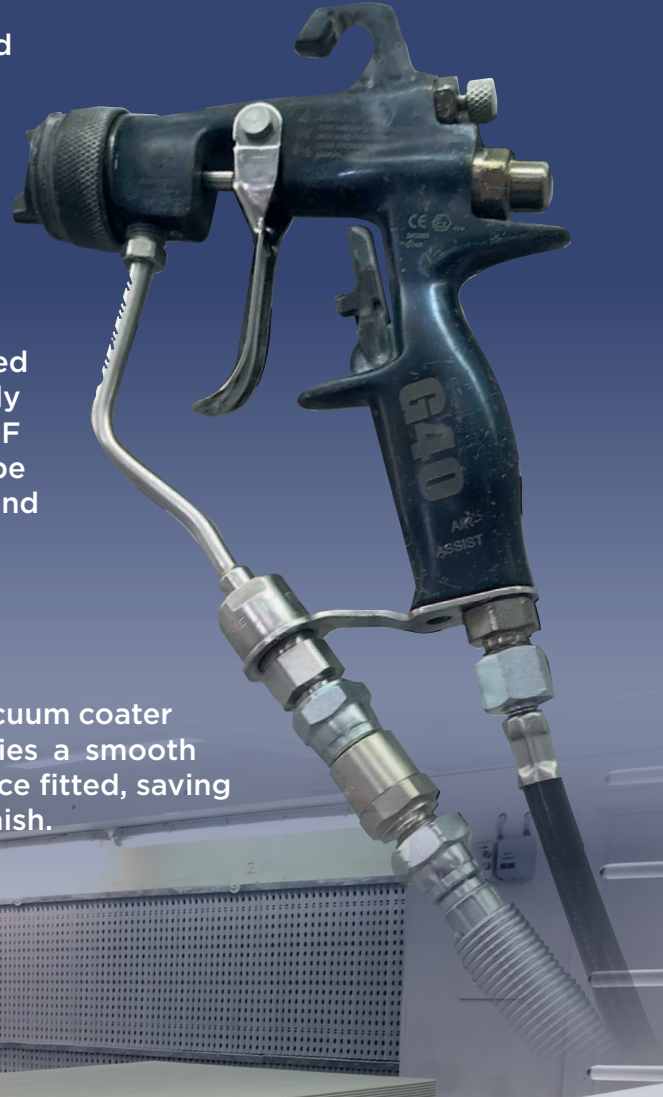

In addition to its manufacture of MDF products Matchboard also offers a priming service to private and trade customers.

Our 3 paint shops are sufficiently equipped to maintain production of quality finished primed MDF boards whilst also creating a clean and safe environment for our sprayers to work in.

In keeping with our environmental focus, water based primer is hand sprayed by our professional team who apply a single coat of primer to approximately 320 sheets of MDF per paint shop per day. These quality primed boards can be purchased white primed to a single side or both sides, and provide the perfect base to be finished in situ.

Coloured primers are also possible as a specialist service. Enquire for details.

Matchboard have also equipped our paintshops with a vacuum coater for priming architraves and skirting. This machine applies a smooth even layer of primer, making it quick and easy to paint once fitted, saving our customers time and the ability to achieve a quality finish.
